

IN THE CLAIMS:

Please amend Claim 1 as follows:

1. (Currently Amended) An ink container detachably mountable to an ink jet recording apparatus which includes a cartridge provided with a recording head and capable of detachably carrying the ink container, and includes a mechanical switch for detecting mounting of the ~~cartridge~~ ink container by its displacement, said container comprising:

a bottom side which is provided with an ink supply port for supplying the ink from an inside of said container to the recording head and which takes a bottom position in use;

a substantially vertical side having an engaging portion for mounting said ink container to the cartridge;

a stepped portion, in said bottom side, forming a recess having an end which is open at said vertical side; and

a projected abutment portion, provided adjacent said vertical side in said recess, for displacing the mechanical switch.

2. (Original) An ink container according to Claim 1, wherein said projected abutment portion has a height which is smaller than a depth of said recess from a surface of said bottom side.

3. (Previously Presented) A recording apparatus comprising:  
a cartridge provided with a recording head, said cartridge detachably  
carrying an ink container according to Claim 1;  
a mechanical switch for detecting mounting by the projected abutment  
portion of said ink container; and  
scanningly reciprocable holding means for holding the cartridge;  
wherein ink is ejected from the recording head of said cartridge in  
accordance with an electric signal for ink ejection to effect recording on a recording  
material.

4. (Previously Presented) An apparatus according to Claim 3, wherein said  
mechanical switch is disposed adjacent a substantially vertical wall of said holding means.
